Summary

I am a research fellow at ISI Kolkata, working under the supervision of Prof. Utpal Garain. My research centers on enhancing deep learning systems with the strengths of symbolic AI techniques for greater logical coherence and domain constraint adherence. While my primary focus is natural language processing, I actively collaborate across domains including vision, medicine, biology, astrophysics, and business applications.

My doctoral dissertation titled "Domain Obedient Deep Learning" has been accepted. My ongoing research focusing on alignment of large language models has recently been supported by an OpenAI Computational Credit Grant. I am also exploring techniques to better understand LLM reasoning.
